## Clinical Outcomes for Knee Pain

At Agnesian HealthCare, we believe that evaluating clinical outcomes is an important component in producing quality patient outcomes. We ask our patients to rate their pain, motion and function on a scale from 0 to 10 during their initial evaluation and at discharge. Lower numbers indicate less pain, better motion and improved function. The graph shows a summary of the results from 418 discharged outpatients from August 2009 through August 2010.

	Average % Improvement
Pain	76.6%
Motion	76.4%
Function	74.4%

Total discharged patients: 418  
Total visits: 4,324 • Visits per referral: 10.3
